

Server::broadcast

Client::processInput

SafeQueue::push

```
graph LR; A[Server::broadcast] --> C[SafeQueue::push]; B[Client::processInput] --> C;
```

The diagram illustrates a data flow where two separate inputs, 'Server::broadcast' and 'Client::processInput', are processed by a single function, 'SafeQueue::push'. The inputs are represented by white boxes with black borders, while the output function is in a gray box with a black border. Blue arrows indicate the direction of the flow from the inputs to the output.
